2013

RELIABLE PARTNER RELIABLE EQUIPMENT Since 1947 «Zaporozhtransformator» PJSC (ZTR) has been supplying high quality power transformers and shunt reactors to the Customers in different industries. ZTR transformers operate in 86 countries worldwide.

ZTR manufactures power transformers and electrical reactors of voltage range from 10 kV up to 1150 kV and power range from 1000 kVA up to 1250 MVA. With annual production capacity 60 000 MVA ZTR is the largest single-site manufacturer in Europe and CIS.

ZTR's production output in 1988 reached the record index on a global scale – 70 000 MVA.

ZTR strives for continuous quality improvements, constantly elaborates new product types and develops design and manufacturing technology in order to meet any customer technical requirements.

The reference list contains the information about power transformers and shunt reactors produced by ZTR from the 1970 to the 2012 inclusively and provides information about installation site, type and quantity of equipment. Information is grouped geographically, and further by product class.

ZTR entered the African market in 1960. At present, our transformers and reactors operate fault-free at power plants and substations in Egypt, Algeria, Morocco, Nigeria, Guinea, Angola, Kenya.

In severe operating conditions with little maintenance our equipment proved itself at its best, ensuring uninterrupted operation of power systems in heat, sand storms and tropical rains.

The very first supply to the African continent was for Aswan Hydro Power Plant (Egypt), at the time referred to as construction of the century. For that project we have manufactured more than 20 transformers 206 and 167 MVA, 500 kV.

All transformers exceeded designed lifetime and almost all of them are still in reliable and uninterrupted operation for over 40 years. Within 4 years (2004-2007) ZTR supplied to Egypt 26 units of 500 kV transformers.

Kenya republic has become the 86th country in sales reference list of the transformer equipment manufactured by "Zaporozhtronsformator" PJSC. In 2012 ZTR has signed a contract for the delivery of 4 transformers rated for 90 MVA voltage 220 kV for Kenyan company "The Kenya Electricity Generating Company" ("KenGen") which will be installed on the geothermal power stations OLKARIA-I and OLKARIA-IV at the height of 2000 m with an excess content of hydrogen sulfide in the air.

Despite remote location of the plant from the region, customers from South and Central America often prefer transformers with ZTR logo to those manufactured by local and international suppliers.

Our plant was selected to supply 21 transformers of 172.5 MVA, 500 kV and 2 autotransformers of 250 MVA, 500 kV for Yacyreta HPS (Argentina), one of the biggest hydraulic power plants in the world.

Among our achievements we have Salto Grande HPP project (Argentina), where in order to meet the need of urgent supply, we designed and manufactured 10 transformers of 100 MVA, 500 kV within 5 months.

ZTR supplied 3 autotransformers of 250 MVA, 345 kV and shunt reactors for Atacama high-voltage substation in Chile, which is located at more than 2.5 km above sea level in a seismically active region (9 units MSK scale).

In 2011 ZTR supplied power transformers for the solar power-station Solana (USA) – two transformers of 200 MVA, 230 kV and two transformers of 58 MVA, 230 kV. In 2012 ZTR has also executed the contract on the delivery of the 9 MVA, 13.8 kV furnace transformer for metallurgical plant Felman Production, Western Virginia state, Letart, USA.

Guatemala has became the 85-th country in the transformer equipment sales reference list of ZTR. In 2012 ZTR signed the contract for delivery of four furnace transformers 45 MVA, 34,5 kV for Compania Guatemalteca de Nickel S.A. (CGN) as well as the contract with Solway Investment Group (SIG) company for delivery of two power transformers 100 MVA, 34,5 kV, purposed for Fenix Ferronickel Plant.

ZTR has a long history of cooperation with customers in 22 countries of Asia and Middle East. The largest countries of the region China and India first tested our equipment more than 30 years ago.

ZTR is well known in Asian markets as a reliable partner, supplying the highest quality equipment, which operates in various climatic and seismic conditions.

This can be illustrated by our supplies to:

- China, where over 30 years we installed 250 large transformers which are still in operation with zero fault rate. Among them is the biggest transformer of 1000 MVA, 500 kV at Suizhong TPP.
- Vietnam, where the majority of transformer fleet was produced in Zaporozhye and operates virtually fault free for many decades. Within 4 years (2004-2007) ZTR supplied to Vietnam 27 units of 500 kV and 225 kV transformers and reactors. In 2007 three big contracts to Vietnam for three main EVN (Ministry of Electricity of Vietnam) Boards were negotiated: SPPMB (O MON s/s), CPPMB (Doc Soi s/s), NPPMB (Quang Ninh and Thuong Tin s/s).
- UAE, where more than 120 transformers were supplied in the early nineties.

In 2010 a contract with the Power Grid Corporation of India Ltd for supply of 43 reactors was concluded. ZTR has activities in the market of India as the member of the consortium with Indian company Crompton Greaves Ltd (CGL), as well as of the consortium with Indian company Transformers & Rectifiers of India Ltd; and within 2011-2012 ZTR fulfilled a series of contracts for delivery of transformers and reactors for this country.

ZTR also supplied a large number of transformers to Syria, Iran, Jordan, Iraq and Yemen.

«Zaporozhtransformator» PJSC is a leader on the CIS transformer market, it's annual production capacity is up to 60 000 MVA. About 80% of all power transformers in CIS countries bear ZTR name. At present, more than 7000 large power transformers are operated across CIS countries.

All thirteen CIS nuclear power plants operate our transformers only. ZTR transformers are used at more than 75% hydraulic and thermal power plants in the region.

One of the most powerful three-phase transformers in the world the 1250 MVA, 330 kV unit was manufactured by our factory for Yuzhno-Ukrainskaya NPP, Ukraine, in 1980. Ultra-high power transformers for 1150 kV transmission lines in Russia were manufactured by ZTR.

ZTR's equipment successfully operates in all climatic and seismic conditions at CIS territory, from the coldest trans-polar regions to the hot deserts of Central Asia.

ZTR's transformers and reactors work virtually faultfree in 21 European countries, including the Baltics, having proven over decades their reliability and efficiency.

ZTR was a principal supplier of 220-750 kV transmission lines linking power systems of former USSR republics (including Baltic countries) with power grids of Eastern Germany, Poland, Czech Republic and Slovakia, Romania, Serbia & Montenegro and Bulgaria, reaching Western Europe, Greece and Turkey networks.

Among the most impressive projects are Kozloduy NPP in Bulgaria (6 three phase transformers 630 MVA, 400 kV, 5 three phase transformers 250 MVA, 400 kV), Berke Dam HPP, Turkey (10 single phase transformers 62.5 MVA, 163 kV) and Solar Power Plants, Spain.

In 2010 Spain has become the 84th country in ZTR sales reference list. In 2010-2011 ZTR supplied eight transformers for solar power plants of Abengoa group.
